

Project Design Phase-II

Customer Journey Map

Date	14 October 2022
Team ID	PNT2022TMID46933
Project Name	Emerging methods for early detection of forest fires
Maximum Marks	4 Marks

Customer Journey Map

	<div></div> <div>Entice</div> <div>How does someone initially become aware of this process?</div>	<div></div> <div>Enter</div> <div>What do people experience as they begin the process?</div>	<div></div> <div>Engage</div> <div>In the core moments in the process, what happens?</div>	<div></div> <div>Exit</div> <div>What do people typically experience as the process finishes?</div>	<div></div> <div>Extend</div> <div>What happens after the experience is over?</div>	
<div></div> <div>Journey</div> <div>Browsing, booking, attending, and rating a local city tour</div>						
<div></div> <div>Steps</div> <div>What does the person (or group) typically experience?</div>	<div>A source of ignition is anything that has the potential to start a fires .</div>	<div>Keep tracking of climate changes.</div>	<div>consumers have accepted the product in the market and customers are beginning to truly buy in.</div> <div>Market for the product is expanding and competition begins developing.</div>	<div>To avoid risk for animals.</div> <div>Detecting fire and identify where it started.</div>	<div>Fire has spread over much of food at the available food .</div> <div>Temperatures reach their peak .</div> <div>Resulting in heat damage. Oxygen is consumed rapidly</div>	<div>Usually the longest stage of a fire.</div> <div>Putting an end to the fire .</div> <div>They characterized a significant decrease in oxygen or fuel .</div>
<div></div> <div>Interactions</div> <div>What interactions do they have at each step along the way?<ul style="list-style-type: none">• People: Who do they see or talk to?• Places: Where are they?• Things: What digital touchpoints or physical objects would they use?</div>	<div>forest officer</div> <div>forest area</div> <div>web camera</div>	<div>Interact with video frame cameras for collecting images.</div>	<div>Identify the fire</div>	<div>Detect forest fire</div>	<div>After detect forest fire, forest fires will be extinguished.</div>	
<div></div> <div>Goals & motivations</div> <div>At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...")</div>	<div>Fire removes heat</div> <div>Drooping embers</div> <div>Chains to move fear of starts</div>	<div>Opens it up to sunlight</div> <div>Nourishes the soil</div>	<div>Gain love towards nature.</div>	<div>Fire frequencies determine the over story of confusion composition</div> <div>Results involving a natural layer rising the yards.</div>	<div>It plays a role in recycling nutrients from the ground</div> <div>...upper vegetation and later to the over story trees.</div> <div>Therapy containing the infertile vegetation and arrested decay</div>	
<div></div> <div>Positive moments</div> <div>What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?</div>	<div>More precise</div> <div>It improves engine efficiency</div> <div>It improves efficiency and performance.</div>	<div>The major factor that affects the fire process, is the quality of the fuel and the environment with really more than one way to prevent the fire leading conditions of everything together</div>	<div>Detection of fire pattern.</div>	<div>They kill harmful insects.</div> <div>They clear away diseased trees.</div> <div>They make way for new trees.</div> <div>The ashire add nutrients to the soil.</div>		
<div></div> <div>Negative moments</div> <div>What steps does a typical person find frustrating, confusing, annoying, costly, or time consuming?</div>	<div>No matter the cause, wildfires are extremely dangerous to people and animals and property and can cause extensive damage to the environment</div>	<div>wildfire emit co2 and other greenhouse gases.</div>	<div>Wildfires can disrupt transportation, communication, power and gas services, and water supply.</div>	<div>Human intervention is the biggest factor contributing to wildfires.</div>	<div>Fire detector systems use many techniques, such as the natural behavior of energy the energy required for data processing.</div> <div>The short range of communication and linked communication the availability of all algorithms when entering an sensor network.</div>	
<div></div> <div>Areas of opportunity</div> <div>How might we make each step better? What ideas do we have? What have others suggested?</div>	<div>High-resolution Satellite cameras fixed on the ground.</div> <div>connected satellite vehicles (drones)</div>				<div>Helpful for future</div>
